12/3 / Ex 18:

A says "B is a Knight".

B says "The two of us are of opposite type".

What is A & B?

Person.

Let p = A is a Knight
 q = B is a Knight

$\neg p$ = A is a Knave.
 $\neg q$ = B is a Knave.

(A, B)

(Knight, Knight).

(Knight, Knave).

(Knave, Knight)

(Knave, Knave).

$A \equiv q$

$B \equiv (p \wedge \neg q) \vee (q \wedge \neg p)$

Let us assume that "A is a Knight" and "B is a Knight".

$$① \quad q = T$$

$$p = T$$

$$\neg p = F$$

$$② \quad (p \wedge \neg q) \vee (\neg p \wedge q) = T$$

$$q = T$$

$$\neg q = F$$

$$① \Rightarrow T = T$$

$$② \Rightarrow (T \wedge F) \vee (F \wedge T) = T$$

$$F \vee F = T$$

$$F \neq T$$

this does not hold.

Let us assume that "A is a Knight" and "B is a Knave".

$$\begin{array}{lll} \textcircled{1} & q = T & p = T \quad \neg p = F \\ \textcircled{2} & (p \wedge \neg q) \vee (\neg p \wedge q) = F & q = F \quad \neg q = T \end{array}$$

$\textcircled{1} \quad p \neq T$ Case does not hold.

Let us assume that "A is a Knave." and "B is a Knight".

$$\begin{array}{lll} \textcircled{1} & q = F & p = F \quad \neg p = T \\ \textcircled{2} & (p \wedge \neg q) \vee (\neg p \wedge q) = T & q = T \quad \neg q = F \end{array}$$

$\textcircled{1} \quad T \neq F$ Case does not hold.

Let us assume that "A is a Knave" and "B is a Knave".

$$\begin{array}{lll} \textcircled{1} & q = F & p = F \quad \neg p = T \\ \textcircled{2} & (p \wedge \neg q) \vee (\neg p \wedge q) = F & q = F \quad \neg q = T \end{array}$$

$$\textcircled{1} \quad F = F \quad \checkmark$$

$$\textcircled{2} \quad (F \wedge T) \vee (T \wedge F) = F$$

$$F \vee F = F$$

Case holds.

\therefore A is a Knave & B is a Knave.

A Says "I am a knave or B is a Knight".
A is a knave or B is a Knight.

A Says "(I) (am) a knave or B is a knight".
A is a knave or B is a knight.
 $\neg p \vee q$.

A Says "Atleast one of us is a knave".

A	B
Knight	Knight
Knight	Knave ✓
Knave	Knight ✓
Knave	Knave ✓

$$(p \wedge \neg q) \vee (\neg p \wedge q) \vee (\neg p \wedge \neg q)$$

None of the cases holds.
 One case may hold.
 more than one case may hold.

(Inclusive).
 $(A = ? \quad B = ?)$ fix.

	A	B
CASE 1	Knight	Knight
CASE 2	Knight	Knave
CASE 3	Knave	Knight
CASE 4	Knave	Knave

$A = \text{Knight} \quad B = ?$

Ex 55-59 P 20
 HW.

Quiz #2.

31- JAN- 2023.

A Says " "
 B Says " I am not a knight".

let $p = A$ is a knight
 $q = B$ is a knight.

CASE 1 Knight Knight.

$p = ? \quad \neg p = ? \quad \neg p = A$ is a knave
 $q = ? \quad \neg q = ? \quad \neg q = B$ is a knave.
